

Three Questions for AI Governance

A simple leadership diagnostic for whether AI governance is visible, usable and owned.

01

Awareness

Know what AI is officially being used — and what may be happening outside leadership visibility.

Leadership cue

Ask: What AI tools is my team officially using — and what may they be using unofficially?

02

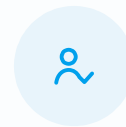

Permission

Be able to explain what good AI use looks like in your organisation — what is encouraged, what is off limits, and why.

Leadership cue

Ask: Could I explain clearly what good AI use looks like here — without reaching for a policy document?

03

Ownership

Make sure responsibility for AI governance has a name, with real time and real authority to act.

Leadership cue

Ask: Who owns AI governance here — and do they have the authority and time to act?

If you cannot answer one of these with confidence, you have found a live governance gap.
